About This Guide

This guide contains procedures for integrating FatWire Content Server with a supported LDAP server, using either FatWire's LDAP integration program or a standalone manual method.

Who Should Use This Guide

This guide is for installation engineers who have experience installing and configuring enterprise-level software, including LDAP servers and databases.

Related Documents

See the following documents in the FatWire documentation set:

- *FatWire Content Server Installation Guide*
- *FatWire Content Server Administrator's Guide*

Graphics Used in This Guide

Graphics in this guide are screen captures of dialog boxes and similar windows that you will interact with during the integration process. These graphics are presented to help you follow the integration process. They are not intended to be sources of information such as parameter values, options to select, and product version numbers.

Conventions

The following text conventions are used in this guide:

- **Boldface** type indicates graphical user interface elements that you select.
- *Italic* type indicates book titles, emphasis, or variables for which you supply particular values.
- Monospace type indicates file names, URLs, sample code, or text that appears on the screen.
- **Monospace bold** type indicates a command.

Third-Party Libraries

FatWire Content Server and its applications include third-party libraries. For additional information, see *FatWire Content Server 7.6 Patch 2: Third-Party Licenses*.

Chapter 1

CS-LDAP Integration Overview

This chapter provides an overview of your options to integrate Content Server with an LDAP server.

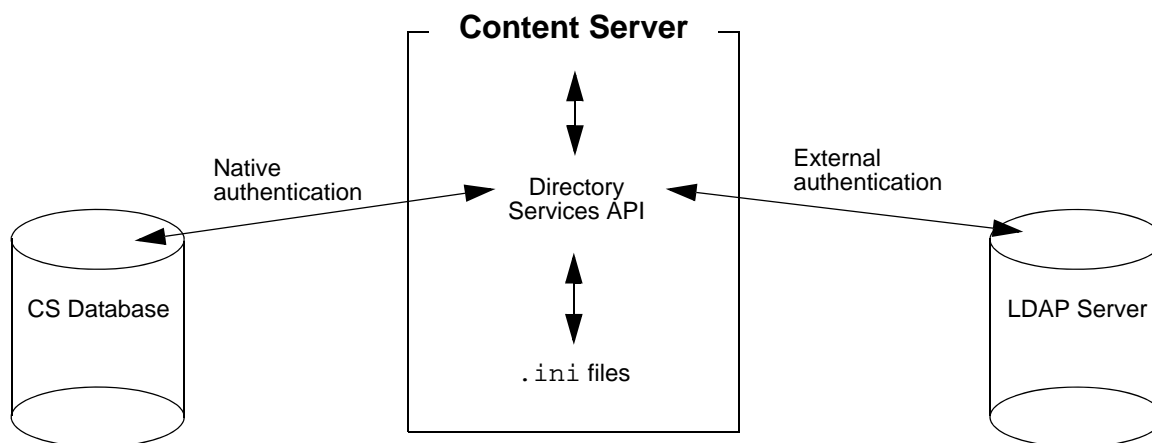

This chapter contains the following sections:

- [Introduction](#)
- [LDAP Integration Options](#)

Introduction

Content Server connects to an authentication system through the Directory Services API. This API provides out-of-the-box support for two types of authentication systems:

- The native authentication system, which validates CS users against Content Server's user management tables `SystemUsers` and `SystemUserAttrs`.
- External directory server (LDAP server), which must be integrated with Content Server in order to validate CS users against the users that are listed in the directory server's database.

Note

External user managers can also be integrated with Content Server, but must be customized to authenticate and/or authorize users.

LDAP Integration Options

The following types of external directory servers can be integrated with Content Server:

- Flat schema LDAP, which provides authentication and authorization services for web and portal applications. LDAP schema is automatically configured when you run the CS-LDAP integrator (included with Content Server). The integrator requires you to first install a supported LDAP server (listed in the *Supported Platform Document*).
- Hierarchical schema LDAP, which provides authentication and authorization services for web applications and requires manual integration with Content Server.

Both integration options involve connecting the LDAP server to the Directory Services API by setting connection properties in Content Server's `futuretense.ini`, `futuretense_xcel.ini`, and `dir.ini` files. Integration is complete when Content

Server's user data is written to the LDAP server. Which type of data must be written depends on LDAP schema:

- Flat schema LDAP requires authentication and authorization to be managed in the LDAP server, which means that Content Server users, ACLs, roles, and sites must be written to LDAP. Users include user accounts, user profiles, and user attributes.
- Hierarchical schema LDAP requires only authentication to be managed in the LDAP server, which means that only users and ACLs must be written to LDAP. (Again, users include user accounts, user profiles, and user attributes.)

Writing roles and sites is optional. Choosing this option requires you to create a site organizational unit in the LDAP server by subordinating Content Server's roles to their relevant sites.

[Table 1](#) summarizes LDAP schema and integration requirements.

Table 1: LDAP Integration Requirements

Integration Type / Method	Flat Schema LDAP		Hierarchical Schema LDAP	
	Authentication	Authorization	Authentication	Authorization
CS Web Application	Required	Required	Required	Optional
CS Portal Application	Required	Required	N/A	N/A
Method	Integrator writes CS users and ACLs to LDAP	Use integrator or manually write CS roles and sites to LDAP	Integrate manually	Integrate manually

- For procedures on integrating with flat schema LDAP, see [Chapter 2, “Integrating with Flat Schema LDAP Servers.”](#)
- For procedures on integrating with hierarchical schema LDAP, see [Chapter 3, “Integrating with Hierarchical Schema LDAP Servers.”](#)

Chapter 2

Integrating with Flat Schema LDAP Servers

This chapter provides instructions for using FatWire's integrator to automatically integrate Content Server with a supported LDAP server. The integrator configures a flat schema for authentication and authorization services for Content Server portal and web applications.

This chapter contains the following sections:

- [CS-LDAP Integrator](#)
- [Running the CS-LDAP Integrator](#)
- [Completing the Integration](#)
- [Post-Integration Steps when no CM Sites are Installed](#)
- [Testing the Integration](#)

CS-LDAP Integrator

FatWire's LDAP integrator requires a fully functional Content Server system (web or portal) and a pre-installed, supported LDAP server.

The integrator works by first prompting you for parameters relating to your CS installation and LDAP server. When you provide the requested information and click **Install**, the integrator uses your inputs to perform the following steps:

1. The integrator sets LDAP connection properties in Content Server's `futuretense.ini`, `futuretense_xcel.ini`, and `dir.ini` files in order to:
 - Establish communication between the LDAP server and Content Server's Directory Services API.
 - Enable the LDAP server to recognize the user that Content Server will invoke to query the LDAP server.
 - Configure a flat schema.
 - Modify the LDAP database to use Content Server ACLs in LDAP format.

For a listing of the LDAP connection properties that are set by the integrator, see [Chapter 3, "Integrating with Hierarchical Schema LDAP Servers."](#) (Note that the properties for flat and hierarchical schema are identical; only the values differ.)

2. In its final steps, the integrator does one of the following, depending on the option you selected:
 - If you selected the **Automatic** option, the integrator loads the LDAP server with Content Server's information — users, ACLs, roles, and sites to which the roles apply.
 - If you selected **Manual**, the LDAP integrator requires an LDAP user with write permissions to manually write users, ACLs, and roles (including their relevant sites) to the LDAP server, either directly or via an `ldif` file. This information is written once the integrator completes its process.
3. Regardless of which option you selected (**Automatic** or **Manual**), you will have to complete the integration by resetting (in the LDAP server) the passwords of Content Server users.

Running the CS-LDAP Integrator

To integrate with flat schema LDAP, complete the steps in the following sections:

- [Prerequisites](#)
- [Integration Steps](#)

Prerequisites

Before integrating Content Server with LDAP, prepare your system:

1. Make sure Content Server is installed on one of the supported platforms and is fully functional. Currently supported platforms are listed in the *Supported Platform Document*, available at the following URL: <http://e-docs.fatwire.com>

For CS installation instructions and verification tests, refer to the Content Server installation guide for your platform.

2. Back up the entire Content Server system. If the integration fails, you can recover the `ldif` file and import it manually to restore Content Server's users and permissions.
3. Make sure the LDAP server is ready for integration:
 - a. If a supported LDAP server is not installed, install it now. (For the list of currently supported LDAP servers, refer to the *Supported Platform Document*.)
 - b. Note the following parameters. You will supply values for them during the integration process:
 - LDAP host name (or IP address)
 - LDAP port number
 - People parent DN
 - Group parent DN
 - Base DN, if you are using Sun JES Directory Server
 - c. Determine whether the user connecting to LDAP will be the same user that is logged in to Content Server. If the connecting user is *not* a Content Server user, you will need to provide a user name and password.
4. During the integration process, you will be prompted to select either the **Automatic** or **Manual** integration option.
 - If you have write permissions to the LDAP server, select **Automatic**. The integrator will write Content Server's users, ACLs, roles, and sites to the LDAP server.
 - If you do not have write permissions to the LDAP server, you will select **Manual** and continue to run the integrator. When the integrator completes its process, an LDAP user with write permissions must be available to complete the integration.

Integration Steps

In this section you will run the CS-LDAP integrator (included on the Content Server CD) to integrate Content Server with a supported LDAP server of your choice.

Note

Instructions in this section apply to both Content Server and Spark.

To integrate Content Server with LDAP

1. If you have not already done so, decompress the CS installation archive to a temporary directory and change to that directory.
2. Run the CS integrator by executing the following command:
 - On Windows: `configureLDAP.bat`
 - On Unix: `./configureLDAP.sh`

3. In the “Pre-Installation Requirements” screen, make sure you have satisfied the requirements shown, then click **Next**.

4. In the “Content Server/Spark information” screen, enter the location of the directory in which Content Server has been installed.

5. In the “LDAP Server” screen, do the following:
 - a. Select the LDAP server you are using.

Note

The Sun Directory Server option is displayed only if you are integrating with Sun Portal Server 7.

- b. Specify whether you are integrating with a standalone instance of Content Server, or a member of a CS cluster.
 - c. Click **Next**.

The screenshot shows the 'LDAP Server' configuration screen in the FatWire Content Server 7 installer. The window title is 'Installer' and the top right corner displays 'FatWire | Content Server 7'. The main heading is 'LDAP Server'. Below the heading, there are two dropdown menus. The first is labeled 'Select the LDAP server you want to integrate:' and has 'OpenLDAP' selected. The second is labeled 'Specify whether this installation is clustered or non-clustered:' and has 'Single Server' selected. At the bottom of the window, there are three buttons: 'Exit', 'Previous', and 'Next'. On the left side of the window, there is a decorative graphic of overlapping CD/DVD discs.

6. In the “LDAP Parameters” screen, enter the following information:

The screenshot shows the 'LDAP Parameters' configuration screen in the FatWire Content Server 7 installer. The form contains the following fields and values:

- LDAP host: localhost
- LDAP port: 389
- User name: cn=Directory Manager
- JNDI password: masked with dots
- People parent DN: ou=People,dc=FATWIRE,dc=COM
- Group parent DN: ou=Groups,dc=FATWIRE,dc=COM

Navigation buttons at the bottom include 'Exit', 'Previous', and 'Next'.

- a. **LDAP Host** — host name or IP address of your LDAP server.
- b. **LDAP Port** — port number on which your LDAP server is listening for connections. The default port, 389, is displayed in the field. Do **not** change this default value unless you are creating a specialized integration.
- c. **User name** — name of the LDAP user used to access your LDAP server. (This field does not appear if you selected **WebLogic Embedded LDAP** in [step 5 on page 16](#).)

The value you enter determines whether Content Server accesses the LDAP server through a Content Server user or an independent user. Do one of the following:

- Leave this field blank if you want the LDAP user to be the same user that is logged into Content Server. The integrator will set the value of the `jndi.connectAsUser` property (in `dir.ini`) to `true`.
- Enter a value if you want the LDAP user to be a user that you specified within your LDAP server. Your value must be a fully qualified, fully distinguished LDAP user name. The integrator will assign the user name to the `jndi.login` property (in `dir.ini`). It will also set `jndi.connectAsUser` to `false`.

Valid entry: `cn=<username>,dc=<domain>,dc=<extension>`

Example: `cn=Manager,dc=fatwire,dc=com`

- d. **JNDI Password** — password of the LDAP user who will access the LDAP server. Enter a value only if you provided a user name in the preceding field.

Note

If you selected **WebLogic Embedded LDAP** in [step 5 on page 16](#), enter the password you provided when you enabled the WebLogic Embedded LDAP Server.

The integrator will assign this password in an encrypted form to the `jndi.password` property (in `dir.ini`).

- e. **People parent DN** — DN of the **People** parent node in your LDAP server. Content Server users will be stored under this node. (This field does not appear if you selected **WebLogic Embedded LDAP** in [step 5 on page 16](#).)

Valid entry: `ou=People,dc=<domain>,dc=<extension>`

Example: `ou=People,dc=fatwire,dc=com`

- f. **Group parent DN** — DN of the **Groups** parent node in your LDAP server. Content Server ACLs will be stored under this node. (This field does not appear if you selected **WebLogic Embedded LDAP** in [step 5 on page 16](#).)

Valid entry: `ou=Groups,dc=<domain>,dc=<extension>`

Example: `ou=Groups,dc=fatwire,dc=com`

- g. Click **Next**.

7. In the “Existing Content Server Password” screen, enter the user name and password for your installation’s CS System Administrator account. (The default values are ContentServer/password.) Re-enter the password for verification, then click **Next**.

Installer FatWire | Content Server 7

Existing Content Server Password

Please enter the EXISTING Username which was used for Content Server administration:

Please enter the EXISTING password.

Verify the password entered:

The existing user name has been detected as: ContentServer

Exit Previous Next

Note

Make sure the information you enter here exactly matches the information used in your CS system. If you enter incorrect information, your CS system will not function properly.

8. In the “Content Server Configuration” screen enter the user name and password of your installation’s CS Application Administrator account. (The default values are fwadmin/xceladmin). Re-enter the password for verification, then click **Next**.

Installer FatWire | Content Server 7

Content Server Configuration

Please Enter EXISTING Username to be used for Application administration:

Password to be used for the Content Server administrator.
Default password is 'xceladmin':

(Must be at least 8 characters)

Verify the password entered:

Note

Make sure that the information you enter here exactly matches the information used in your CS system. If you enter incorrect information, your CS system will not function properly.

9. In the next “Content Server Configuration” screen, enter the password that will be assigned to all users on your CS system (except the CS System Administrator, CS Application Administrator, and `DefaultReader` accounts).

Installer FatWire | Content Server 7

Content Server Configuration

Please Enter the password for all other users:
All the users will be created to LDAP with this password.

.....
(Must be at least 8 characters)

Verify the password entered:

.....

Exit Previous Next

Note

For added security, Content Server passwords are one-way encrypted, which means they cannot be decrypted and duplicated in the LDAP server.

The password that you provide in this screen is a dummy password that will be assigned to all Content Server users (except the CS System Administrator, CS Application Administrator, and `DefaultReader`). At the end of the integration process, the users' original passwords must be re-assigned to them. Special instructions also apply to OpenLDAP with encrypted passwords. (Instructions for re-assigning passwords are given in “[Completing the Integration](#),” on page 24.)

Re-enter the password for verification, then click **Next**.

10. In the “LDAP Integration Option” screen, do one of the following and click **Next**:

- If you have write permissions to the LDAP server, select **Automatic**.

The integrator will write CS users, ACLs, roles, and sites to the LDAP server. (All users will be assigned the password you specified in [step 9 on page 21](#).)

- If you do not have write permissions to the LDAP server, select **Manual**.

When the integrator completes its task, an LDAP user with write permissions will have to write Content Server’s users, ACLs, roles, and sites to the LDAP server, either directly or via an `ldif` file.

Note

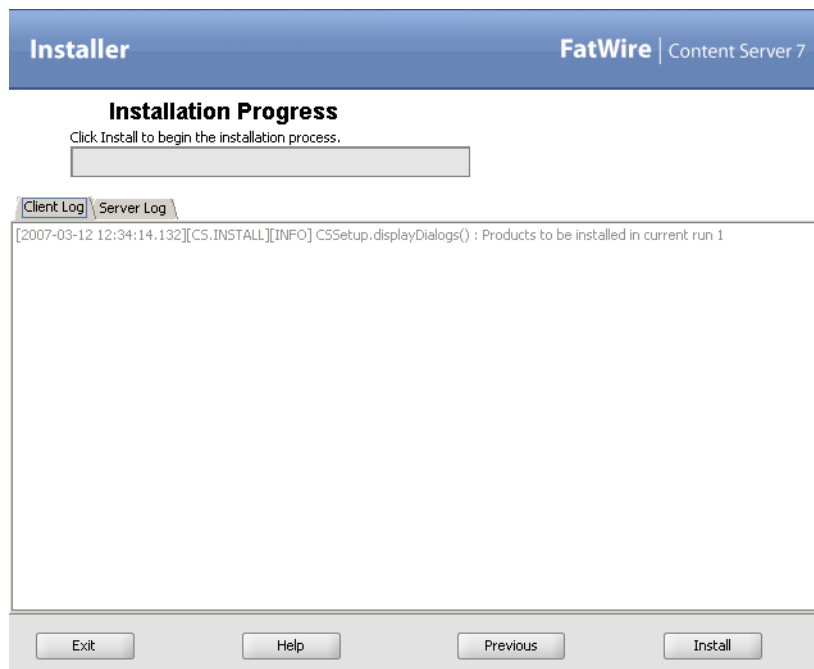

If you chose the **WebLogic** or **OpenLDAP** option, the integrator will create an `ldif` file in the `<cs_install_dir>/ldif` directory.

11. In the “Settings Summary” screen, review the choices you have made. If you need to make changes, click the **Back** button to return to the appropriate screen. Otherwise, click **Next** to proceed with the integration.

12. In the “Installation Progress” screen, click **Install** and wait for the integration process to complete.

When the “Successful” pop-up dialog appears, the integrator’s process is complete.

13. Test your LDAP integration by logging in to Content Server, then continue with the next step.

Completing the Integration

Note

To complete the steps in this section, you must have write permissions to the LDAP server.

If you chose the **Manual** integration option in the previous section, you will now load the LDAP server with CS users, ACLs, roles, and sites. Regardless of your choice, you will also reset the passwords of Content Server users.

To complete the CS-LDAP integration

1. If the LDAP integrator's **Automatic** option was chosen (in [step 10 on page 22](#)), skip to [step 3](#). Otherwise, continue with the next step.
2. If the LDAP integrator's **Manual** option was chosen (in [step 10 on page 22](#)), load the LDAP server with CS users, ACLs, roles, and sites, using one of the following options:
 - Import an `ldif` file.

Note

If you are integrating with WebLogic or OpenLDAP, an `ldif` file was created in the `<cs_install_dir>/ldif` directory by the integrator. For any other LDAP server, you must create your own `ldif` file.

- Write users, ACLs, roles, and sites directly to the LDAP server. For information about which users, ACLs, roles, and sites to write, see the following steps in [Chapter 3](#):
 - [“Step 3. Check the mail Attribute,” on page 32](#)
 - [“Step 4. Create LDAP User Groups \(Content Server ACLs\),” on page 33](#)
 - [“Step 5. Create Required Users and Assign Them to LDAP Groups,” on page 34](#)
 - [“Step 6. Create Sites and Roles in the LDAP Server,” on page 35](#)
3. In the LDAP server, reset the passwords for all Content Server users as follows:
 - **All LDAP servers:**
Set the users' passwords to their original values, **except for** the CS System Administrator, CS Application Administrator, and `DefaultReader` accounts.
If you do not change the passwords users will not be able to log in to Content Server with their originally assigned passwords.

- **OpenLDAP with encrypted passwords:**

If you are using OpenLDAP *and* have configured it to use encrypted passwords, you **must** change the passwords for all Content Server users **including** passwords for the CS System Administrator, CS Application Administrator, and DefaultReader accounts.

This step is required because the LDAP integrator writes user passwords to the LDAP directory as plaintext, whereas OpenLDAP expects password hashes when password type is configured as SSHA. If you fail to complete this step, your Content Server system will not function properly.

For instructions on changing user passwords on supported LDAP servers, see *Configuring Third-Party Software*.

Post-Integration Steps when no CM Sites are Installed

If no CM sites are currently deployed, then after integrating Content Server with LDAP you will be unable to log in, as no sites are assigned to the fwadmin user. The solution is to manually create the following new group entries in your LDAP server and assign fwadmin to each of these groups:

```
Management Site-SiteAdmin
Management Site-GeneralAdmin
Management Site-WorkflowAdmin
Management Site-AdvancedUser
```

Example LDIF

```
dn: cn=Management Site-SiteAdmin,ou=Groups,dc=fatwire,dc=com
objectClass: top
objectClass: groupOfUniqueNames
uniqueMember: cn=fwadmin,ou=People,dc=fatwire,dc=com
```

```
dn: cn=Management Site-GeneralAdmin,ou=Groups,dc=fatwire,dc=com
objectClass: top
objectClass: groupOfUniqueNames
uniqueMember: cn=fwadmin,ou=People,dc=fatwire,dc=com
```

```
dn: cn=Management Site-WorkflowAdmin,ou=Groups,dc=fatwire,dc=com
objectClass: top
objectClass: groupOfUniqueNames
uniqueMember: cn=fwadmin,ou=People,dc=fatwire,dc=com
```

```
dn: cn=Management Site-AdvancedUser,ou=Groups,dc=fatwire,dc=com
objectClass: top
objectClass: groupOfUniqueNames
uniqueMember: cn=fwadmin,ou=People,dc=fatwire,dc=com
```

Testing the Integration

Test your LDAP-integrated system by opening a browser and entering the following URL:

```
http://<servername>:<port>/servlet/CatalogManager?ftcmd  
=login&<username>=ContentServer&<password>=password
```

where

<servername> is the name of the machine that is hosting the CS system

<port> is the port number of that server

<username> is user-defined (Content Server, in this example)

<password> is user-defined (password, in this example)

- If your browser displays a “Login Successful” message, you have integrated your LDAP plug-in correctly.
- If you do not see the “Login Successful” message, verify that you created the ContentServer user in the LDAP server, and that all properties are set to the correct values.

Chapter 3

Integrating with Hierarchical Schema LDAP Servers

This chapter provides instructions for integrating Content Server with hierarchical schema LDAP servers.

This chapter contains the following section:

- [Integration Steps](#)
- [Testing the Integration](#)

Integration Steps

To integrate with hierarchical schema LDAP, you will complete the following steps:

[Step 1. Configure Content Server's LDAP Connection Properties \(page 28\)](#)

[Step 2. Configure the LDAP Server \(page 32\)](#)

[Step 3. Check the mail Attribute \(page 32\)](#)

[Step 4. Create LDAP User Groups \(Content Server ACLs\) \(page 33\)](#)

[Step 5. Create Required Users and Assign Them to LDAP Groups \(page 34\)](#)

[Step 6. Create Sites and Roles in the LDAP Server \(page 35\)](#)

[Step 7. If You Completed Step 6 \(page 37\)](#)

Note

In hierarchical schema LDAP, management of users and ACLs is required. Management of sites and roles is optional.

Step 1. Configure Content Server's LDAP Connection Properties

In this step, you will configure several properties in Content Server's `.ini` files to establish communication with LDAP. The files are:

- `futuretense.ini`
- `dir.ini`
- `futuretense_xcel.ini` (optional, if you wish to manage sites and roles directly in the LDAP server).

A. Start the Property Editor

Execute the following scripts at the MS DOS prompt or in a UNIX shell:

- Windows: `propeditor.bat`, which is usually located in `<cs_install_dir/>`
- Solaris: `propeditor.sh`, which is usually located in `<$HOME/cs_install_dir>`

If you need detailed instructions on starting the Property Editor or you would like more information on the properties to be modified, see the *Content Server Property Files Reference*.

B. Configure Properties in `futuretense.ini`

1. Open `futuretense.ini` in the Property Editor.
2. Select the **Authentication** tab.
3. Set the following properties as shown in the table below:

Property (In <code>futuretense.ini</code>)	Value
<code>cs.manageproperty</code>	<code>dir.ini</code>
<code>cs.manageUser</code>	<code>com.openmarket.directory.jndi.auth.JNDILogin</code>

4. Select **File > Save** to save the values.
5. Select **File > Close**.

C. Configure Properties in dir.ini

1. Open `dir.ini` in the Property Editor.
2. Select the **Attribute Names** tab and set the following values for the following properties:

Property (in dir.ini)	Value
cn	OpenLDAP: cn
loginattribute	OpenLDAP: cn
password	OpenLDAP: userPassword
uniquemember	OpenLDAP: uniquemember
username	OpenLDAP: uid

3. Select the **Global Data** tab and set the following values for the following properties:

Property (in dir.ini)	Value
groupparent	OpenLDAP: ou=groups,dc=companyname,dc=com
peopleparent	OpenLDAP: cn=People,dc=companyname,dc=com

4. Select the **Interface Implementations** tab and specify the following values for the following properties:

Property (in dir.ini)	Value
className.IDir	com.openmarket.directory.jndi.JNDIDir
className.IName	com.openmarket.directory.jndi.NameWrapper
className.IUserDir	com.openmarket.directory.jndi.LDAPUserDir

5. Select the **JNDI SPI Env** tab and specify the following values for the following properties:

Property (in dir.ini)	Value
jndi.baseurl	ldap://<servername:port>

Property (in dir.ini)	Value
jndi.connectAsUser	<p>If Content Server can query the LDAP server for information as the user who is logged in to the Content Server interface and is making the query, set this property to <code>true</code>. (The same user must be defined in the LDAP server.)</p> <p>If Content Server must query the LDAP server as a specific user other than the user who is logged in to the Content Server interface, set this property to <code>false</code>. Then specify a valid <code>user name/password</code> combination with the <code>jndi.login</code> and <code>jndi.password</code> properties.</p> <p>OpenLDAP: <code>false</code></p>
jndi.custom	(leave this value blank)
jndi.login	<p>If the <code>jndi.connectAsUser</code> property is set to <code>false</code>, specify the fully qualified, fully distinguished name of the user account that Content Server will use to query the LDAP server. (The same user must be defined in the LDAP server.)</p> <p>OpenLDAP: <code>cn=Manager,dc=companyname,dc=com</code></p> <p>Note: <code>jndi.connectAsUser</code> determines how a Content Server user is connected to the LDAP server, and therefore defines the LDAP user to be either administrative or non-administrative.</p> <ul style="list-style-type: none"> • If <code>jndi.connectAsUser=true</code>, then Content Server defines the LDAP user to be the same one that is logged in to Content Server and connects that user to the LDAP server. For example, <code>jndi.connectAsUser=true</code> connects a Content Server administrator to LDAP as an administrator of the LDAP system. • If <code>jndi.connectAsUser=false</code>, then Content Server defines the LDAP user to be the one that is specified in the <code>jndi.login</code> property (in <code>dir.ini</code>) and connects that user to the LDAP server.
jndi.password	<p>If the <code>jndi.connectAsUser</code> property is set to <code>false</code>, specify the password for the user account that Content Server will use to query the LDAP server.</p> <p>This value is encrypted.</p>

6. Select the **Schema Defaults** tab and specify the following values for the following properties:

Property (in dir.ini)	Value
defaultGroupAttrs	OpenLDAP: objectclass\=top&objectclass\ \=groupOfUniqueNames
defaultPeopleAttrs	OpenLDAP: objectclass\=top&objectclass\ \=Person& objectclass\ \=organizationalPerson
objectclassGroup	OpenLDAP: groupOfUniqueNames
objectclassPerson	OpenLDAP: organizationalPerson
requiredGroupAttrs	(leave this value blank)
requiredPeopleAttrs	Specify all the required user attributes for this LDAP server. For example: sn=Last Name&cn=Full Name

7. Select **File > Save**.
8. Select **File > Close**.

D. Configure Properties in futuretense_xcel.ini

Note

If you do not wish to manage sites or roles in the LDAP server, skip the steps in this section.

1. Open `futuretense_xcel.ini` in the Property Editor.
2. Select the **Xcelerate** tab.
3. Set values for the following properties:

Property (in futuretense_xcel.ini)	Value
<code>xcelerate.usermanagerclass</code>	The value depends on the type of deployment you are using. Example value: <code>com.openmarket.xcelerate.user. UserManager</code>
<code>xcelerate.rolemanagerclass</code>	Example value: <code>com.openmarket.xcelerate.roles. RoleManager</code>

4. Select the **User Management** tab.
5. Set values for the following properties:

Property (in <code>futuretense_xcel.ini</code>)	Value
<code>xcelerate.sitesroot</code>	Example value: <code>ou=sites.dc=<domainname>.dc=com</code>
<code>xcelerate.sitenameattr</code>	Example value: <code>ou</code>
<code>xcelerate.displayablenameattr</code>	The name of the user attribute describing the display name, if different from the login name.

6. Select **File > Save**.
7. Select **File > Close**.
8. Stop and restart the application server for your changes to take effect.

Step 2. Configure the LDAP Server

1. Configure the LDAP server to recognize the user that is specified in the `jndi.connectAsUser` and `jndi.login` properties (given on [page 30](#)).
2. Assign the same user correct permissions to connect to LDAP, to look up groups, to look up user attributes, and so on.

Note

Assign permissions judiciously. Once Content Server is LDAP-integrated, any CS administrator who connects to the LDAP server as a user with write permissions can still manage ACLs, users, sites, and roles from the Content Server interface. Some of the operations will propagate to the LDAP server, while other operations might result in errors.

For information about management operations in the CS interface and their effect on the LDAP server, see the appendix “[Managing Users, Sites, and Roles in LDAP-Integrated CS Systems](#)” in the *Content Server Administrator’s Guide*.

Step 3. Check the `mail` Attribute

Each Content Server user must have a `mail` attribute (an attribute that stores an e-mail address). Before proceeding, check that the LDAP server’s user entries have a `mail` attribute. For information about Content Server’s `mail` attribute, see the *Content Server Administrator’s Guide*.

Step 4. Create LDAP User Groups (Content Server ACLs)

Use the tools provided by your LDAP server to create groups that correspond to Content Server ACLs. The required ACLs are listed in this section.

Note

- **Using ldif.** You can create groups in the LDAP server by writing an `ldif` file that contains the groups specified in this step, and the user and group memberships in “[Step 5. Create Required Users and Assign Them to LDAP Groups,](#)” on page 34. You can then import the `ldif` file into your user directory.

The method for importing the `ldif` file varies for each directory, but the structure of the file is standardized among LDAP servers. For a sample `ldif` file, see [Appendix A](#).

- **Naming conventions.** In the steps that follow, you will be duplicating Content Server’s users and ACLs (optionally, sites and roles) in the LDAP server. All names must be duplicated *exactly*, including case, spaces, and special characters.

Default ACLs

The following list names the Content Server system default ACLs. You must create groups in the LDAP server whose names exactly match the ACL names below. For information about the access privileges that are granted by these ACLs, see the “System Defaults” appendix in the *Content Server Administrator’s Guide*.

- Browser
- ContentEditor
- ContentReader
- ElementEditor
- ElementReader
- PageEditor
- PageReader
- RemoteClient
- SiteGod
- TableEditor
- TableReader
- UserEditor
- UserReader
- Visitor
- VisitorAdmin
- xceladmin
- xceleeditor
- xcelpublish

Web Services ACLs

If you are using web services, create an LDAP group for each of the following ACLs. A group name must *exactly* match the ACL name:

- WSAdmin
- WSEditor
- WSUser

For information about the access privileges granted by these ACLs (groups), see the “System Defaults” appendix in the *Content Server Administrator’s Guide*.

Custom ACLs

If any custom ACLs have been created in Content Server since its installation, duplicate the ACLs as groups in the LDAP server. Group names must *exactly* match the names of the ACLs.

Step 5. Create Required Users and Assign Them to LDAP Groups

In this step, you will duplicate the following users and their group memberships in the LDAP server:

- [Content Server's Default Users](#)
- [Sample Site Users](#)
- [Custom Users](#)

Content Server's Default Users

1. [Table 2](#) lists default users of the Content Server application. Duplicate the default users in the LDAP server, making sure to name them *exactly* as shown in [Table 2](#).
2. Make the duplicated users members of the groups shown in [Table 2](#):

Table 2: Default Users and Group Memberships

Default User	Group Memberships (ACLs)
<i>ContentServer</i> (user that is created in the database during the Content Server installation)	Browser, ContentEditor, ElementEditor, ElementReader, PageEditor, PageReader, SiteGod, TableEditor, TableReader, UserEditor, UserReader
fwadmin	Browser, ElementEditor, PageEditor, RemoteClient, TableEditor, UserEditor, UserReader, Visitor, VisitorAdmin, xceladmin, xceleeditor
DefaultReader	Browser, Visitor

Custom Users

1. Duplicate in the LDAP server all of Content Server's active custom users (all users who are assigned to Content Server's active sites). Name the users exactly as they are named in Content Server.
2. Assign each custom user to the LDAP groups (created in "[Custom ACLs](#)," on [page 34](#)) that correspond to the user's ACLs in Content Server.

Sample Site Users

If you installed sample sites, create the associated sample users in the LDAP server. (Procedures are identical to those for custom users.) For information about sample users and sample sites, see the *Content Server Administrator's Guide*.

Step 6. Create Sites and Roles in the LDAP Server

Note

If you do not wish to manage sites and roles in the LDAP server, then you have completed the CS-LDAP integration. To verify the integrated system, continue with “[Testing the Integration](#),” on page 38.

If you plan to use LDAP attribute mapping to manage sites and roles in your LDAP server, you will need to hierarchically order the sites and roles, as shown by the example in [Figure 1](#) (system-defined roles are listed in [Table 3](#), on page 36). Continue with the steps in this section.

Figure 1: LDAP Hierarchies

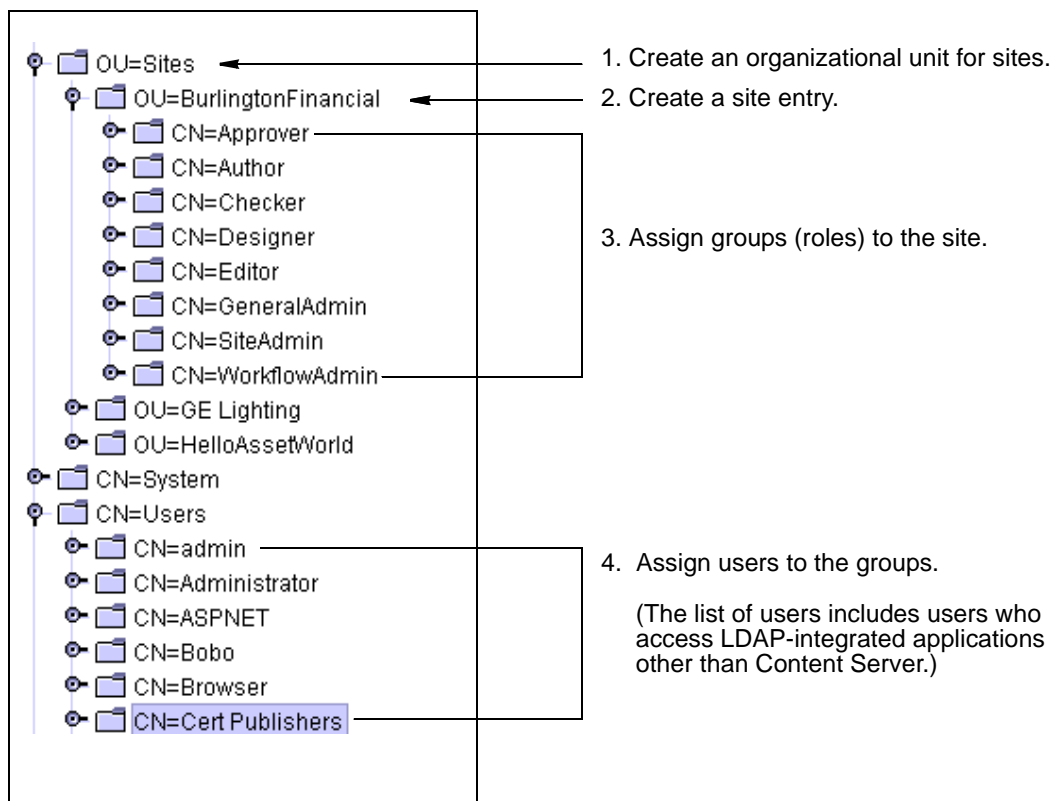

Table 3: System-Defined Roles

Role	Description
GeneralAdmin	Default system role for global Content Server administrators. Required for users who need access to the Admin tab (and all other possible functions) in the tree. Note: A user with the GeneralAdmin role must also have the <code>xceladmin</code> ACL in order to use any of the functions in the Admin tab.
SiteAdmin	Default system role for site administrators. Required for users who are administrators of selected sites and therefore need access to the Site Admin tab (which displays a subset of the functions in the Admin tab). Assign the SiteAdmin role to users who will manage, but not create, other site users. Note: A site user with the SiteAdmin role must also have the <code>xceladmin</code> ACL in order to use functions on the Site Admin tab.
WorkflowAdmin	Default system role for workflow administrators. Required for users who need access to the Workflow tab in the tree. Note: A user with the WorkflowAdmin role must also have the <code>xceladmin</code> ACL in order to use functions on the Workflow tab.
AdvancedUser	Grants Content Server users access to the Advanced interface.
DashUser	Grants Content Server users access to the Dash interface.

To create a hierarchical schema, complete the following steps in the LDAP server:

1. Create an organizational unit for sites. For an example, see step 1 in [Figure 1, on page 35](#).
2. Create a site entry under the site's organizational unit:

Complete this step by duplicating the names of Content Server's active sites *exactly* as they are named in the Content Server interface (**Admin** tab). For an example, see step 2 in [Figure 1, on page 35](#).

Note

If the sites you plan to use do not yet exist in Content Server, you can first create them in the LDAP server, then duplicate them (*with identical names, including case*) in Content Server.

3. Assign groups to each site:

Complete this step for each site by *exactly* duplicating the names of the Content Server roles that are assigned to the site. For an example, see step 3 in [Figure 1](#).

When creating a group for a system default role, name the group to exactly match the role names listed here:

- GeneralAdmin (**always assign this group to a site**)
- SiteAdmin

- WorkflowAdmin
- AdvancedUser
- DashUser

Note

If the roles you plan to use do not yet exist in Content Server, you can first create them as groups in the LDAP server, then duplicate them as roles (with identical names, including case) in Content Server. For the list of system-defined roles, see [Table 3, on page 36](#).

4. Assign users to the groups. Name the users exactly as they are named in Content Server. For an example, see step 4 in [Figure 1](#).

Note

If you are completing the flat schema manual integration process ([Chapter 2](#)), reset Content Server users' passwords. For instructions, see [step 3 on page 24](#).

Step 7. If You Completed Step 6

1. If in the previous step you created sites and roles in the LDAP server, but they do not exist in the Content Server database, create the same sites and roles in Content Server, naming them exactly as in the LDAP server. For instructions on creating sites and roles in the CS database, see the following section and chapter in the *Content Server Administrator's Guide*:
 - "Creating a Role"
 - Chapter 7, "Assembling and Organizing CM Sites"
2. Assign the users to their relevant sites. For instructions, see "Granting Users Access to a Site" in the *Content Server Administrator's Guide*.

Step 8. Post-Integration Steps when no CM Sites are Installed

If no CM sites are currently deployed, then after integrating Content Server with LDAP you will be unable to log in, as no sites are assigned to the fwadmin user. The solution is to manually create the following new group entries in your LDAP server and assign fwadmin to each of these groups:

```
Management Site-SiteAdmin
Management Site-GeneralAdmin
Management Site-WorkflowAdmin
```

Example LDIF

```
dn: cn=Management Site-SiteAdmin,ou=Groups,dc=fatwire,dc=com
objectClass: top
objectClass: groupOfUniqueNames
uniqueMember: cn=fwadmin,ou=People,dc=fatwire,dc=com
```

```
dn: cn=Management Site-GeneralAdmin,ou=Groups,dc=fatwire,dc=com
objectClass: top
objectClass: groupOfUniqueNames
uniqueMember: cn=fwadmin,ou=People,dc=fatwire,dc=com
```

```
dn: cn=Management Site-WorkflowAdmin,ou=Groups,dc=fatwire,dc=com
objectClass: top
objectClass: groupOfUniqueNames
uniqueMember: cn=fwadmin,ou=People,dc=fatwire,dc=com
```

Testing the Integration

Test your LDAP-integrated system by opening a browser and entering the following URL:

```
http://<servername>:<port>/servlet/CatalogManager?ftcmd
=logins&<username>=ContentServer&<password>=password
```

where

<servername> is the name of the machine hosting the CS system

<port> is the port number of that server

<username> is user-defined (ContentServer, in this example)

<password> is user-defined (password, in this example)

- If the browser displays a “Login Successful” message, you have integrated your LDAP plug-in correctly.
- If you do not see the “Login Successful” message, verify that you created the ContentServer user in the LDAP server, and that all properties are set to the correct values.

Appendix A

Sample LDIF for Hierarchical Schema LDAP

This appendix contains a sample `ldif` file for LDAP servers configured with a hierarchical schema.

Sample Idif File

The sample ldif file below defines users and groups for Content Server's sample sites HelloAsetWorld, Burlington Financial, GE Lighting, and Spark. The file re-creates the system default users, sample site users, their ACLs, and their roles.

Note

The structure of the sample file below applies to any LDAP server using a hierarchical schema.

```

1      dn: dc=fatwire,dc=com
2      dc: fatwire
3      objectClass: dcObject
4      objectClass: organization
5      description: OpenLDAP test pre_cs_setup
6      o: Fatwire Software
7
8      dn: cn=Manager, dc=fatwire,dc=com
9      objectClass: organizationalRole
10     cn: Manager
